Press Release: Kooler Ice introduces new Ice Vending Machine

Montezuma, GA - Kooler Ice Inc. introduced its first packaged ice vending machine at the Georgia National Fair October 4, 2007. "After completing an extensive research and development program, the Kooler Ice Vending Machine is now ready for the market", states Kerry Seymour, President of Kooler Ice. We have been studying the package ice industry for quite some time, states Seymour and we believe our new ice vending machine will provide owners with a way to increase their package ice profits by providing them a low cost way to produce, store and automatically bag ice on site, 24 hours a day.

The compact size of the Kooler Ice Vending Machine is key, the unit is 51" wide, 100" long and 103" tall states Seymour. The machines compact size allows for easy placement at convenience stores, grocery stores, gas stations, boat ramps, etc.

While the Patent Pending Kooler Ice Vending Machine is small, it is very productive. The unit comes equipped with a Scotsman, Prodigy ice maker and has the capability of producing over 200 – 10 lb bags of fresh ice per day. For higher volume production requirements, a second ice maker can be added to increase production to over 300 – 10 lb bags of fresh ice per day.

"Since we are a Central Georgia based company, we thought the Georgia National Fair would be an excellent place to introduce our machine" and so far, the reception has been overwhelming", States Seymour. "We have received numerous dealer and owner inquiries and are looking forward to developing partnerships with owners and distributors who want to buy and represent our new ice vending machines".
